# Introduction

Se requiere visualizar información sobre ciberseguridad de todas las unidades en un solo lugar de manera específica.

La información de ciberseguridad se encuentra descentralizada

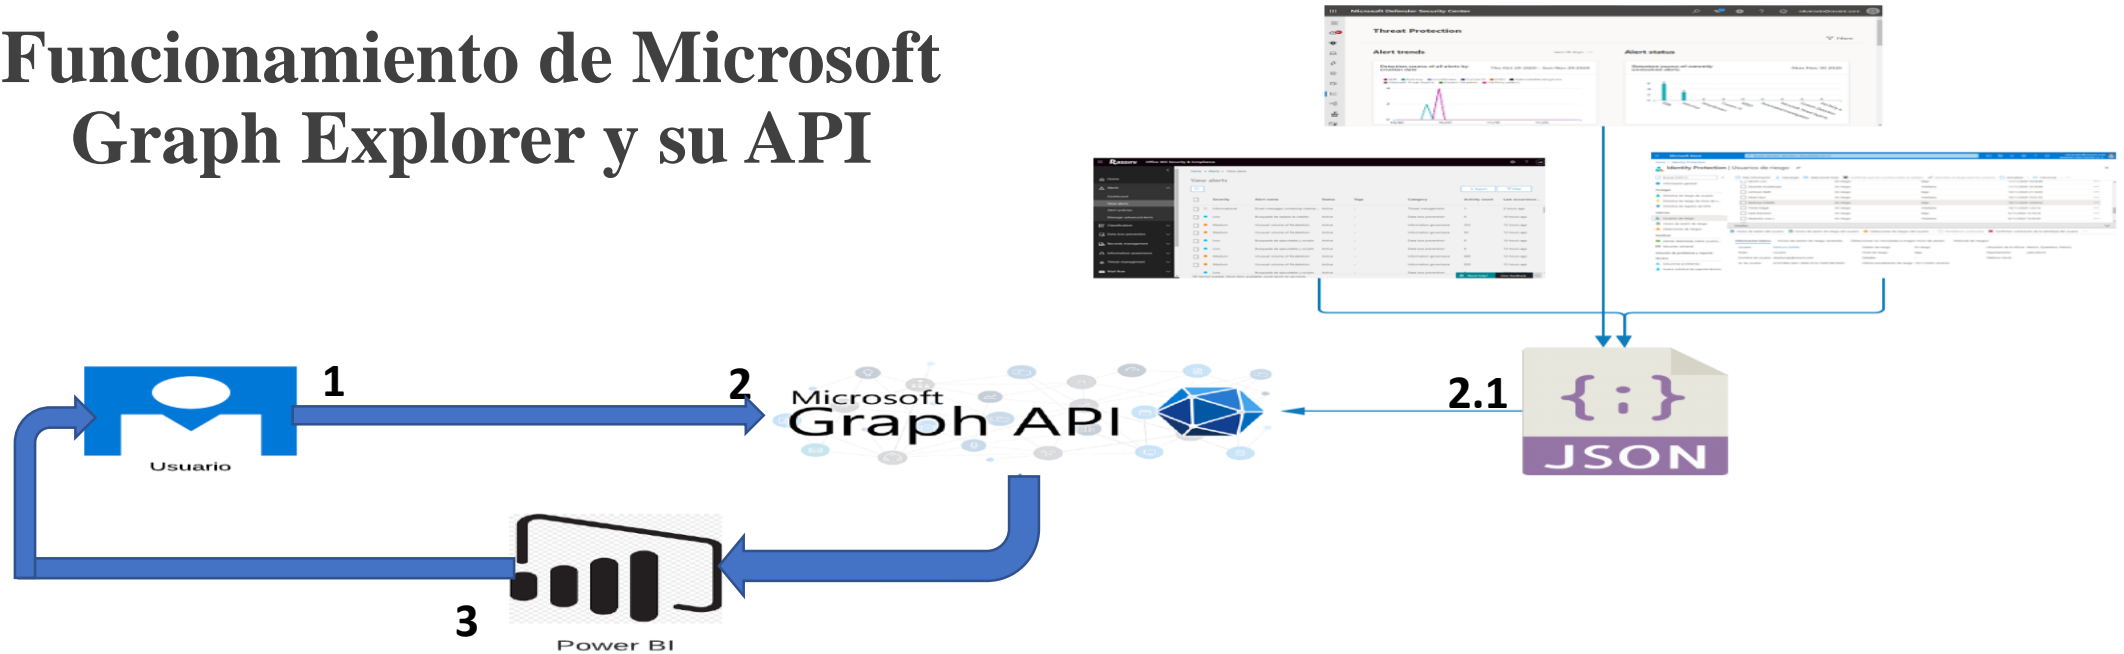

Entrelazar información de los portales de ciberseguridad

Visualizar información importante y concreta en un solo lugar

# Methodology

## Funcionamiento de Microsoft Graph Explorer y su API

Se desarrolló a partir de una API ya construida llamada Microsoft Graph, donde los datos se encontraban sin transformar en un formato de texto llamado JSON donde después los visualizaremos en Power BI

# Methodology

## Estructura de los datos en formato JSON

Los metadatos se encuentran en el JSON de forma desordenada donde nosotros los ordenamos de manera que tengan un sentido al lector

# Methodology

## Ejemplo de como se ven algunas situaciones sobre ciberseguridad

The image displays a screenshot of the Microsoft Graph API Explorer interface. On the left, a sidebar lists various security-related queries under the 'Security (79)' category, such as 'alerts', 'alerts with High severity', and 'alerts filter by Category'. The main area shows a 'Response preview' for a GET request to the 'https://graph.microsoft.com/v1.0/security/alerts' endpoint. The response is a JSON array of alert objects. Three specific alert objects are highlighted with arrows pointing to their detailed JSON representations on the right side of the image.

The highlighted alerts are:

- Inicio de sesión desconocidos**: An alert with ID '2808-89-22781-36-87-2523861', category 'UnknownSignin', and a description: 'Malware and unwanted software are undesirable applications that perform annoying, disruptive, or harmful actions on affected machines. Some of these undesirable applications can replicate and spread from one machine to another. Others are able to receive commands from remote attackers and perform activities associated with cyber attacks. In this detection right indicate that the malware was stopped from delivering its payload. However, it is prudent to check the machine for signs of infection.'
- Spam**: An alert with ID '2808-89-22781-33-86-84226202', category 'Spam', and a description: 'Malware and unwanted software are undesirable applications that perform annoying, disruptive, or harmful actions on affected machines. Some of these undesirable applications can replicate and spread from one machine to another. Others are able to receive commands from remote attackers and perform activities associated with cyber attacks. In this detection right indicate that the malware was stopped from delivering its payload. However, it is prudent to check the machine for signs of infection.'
- Malware**: An alert with ID '2808-89-22781-33-86-84226202', category 'Malware', and a description: 'Malware and unwanted software are undesirable applications that perform annoying, disruptive, or harmful actions on affected machines. Some of these undesirable applications can replicate and spread from one machine to another. Others are able to receive commands from remote attackers and perform activities associated with cyber attacks. In this detection right indicate that the malware was stopped from delivering its payload. However, it is prudent to check the machine for signs of infection.'

# Methodology

## Ejemplo de categorías de ciberseguridad

Ataques a maquinas virtuales

eDiscovery

Manejo de amenazas

IP Maliciosas

Búsqueda de ejecutables y scripts

Gobierno de datos

Descargas de archivos sospechosos

Búsqueda de tarjetas de crédito

Creación de reglas de trafico en la red

Eliminación/Descarga de archivos masivamente

# Results

# Conclusions

Se dispone de un dashboard interactivo donde tenemos información, graficas y reportes a nuestras necesidades.

No hay necesidad de buscar de un portal a otro la información de los usuarios en riesgo.

Interfaz y filtros amigables con el usuario
