SERIUNAM

(National Collective Catalog of Periodicals)

Registers 53,000 journals and more than eight million fascicles in the libraries of the UNAM and other Mexican institutions of higher education.

Direct visibility

Registers the existence of Mexican and foreign journals.

It allows to locate which libraries have a certain title and their collections

Available free at <http://dgb.unam.mx> under the link "Online catalogs".

Indirect visibility: Presence in Directories

The presence in directories of periodicals is of great relevance since they are often used as a tool to locate and select journals.

It is important that publishers differentiate between the services offered by a directory and those offered by a database. The directories provide information about the journal as a whole, but not about the fascicles and papers published in it.

In this sense, it is important that the credits differentiate between indexing services (databases) and their registration in directories or catalogs.

Created in 1931, with printed versions, on CD-ROM and Internet :
<http://www.ulrichsweb.com>

Apparently, it does not apply selection criteria to include journals.

The editors should check if their journals are contained in Ulrich's and if the information is updated and correct.

This directory also registers databases: more than 2,500 available on the Internet, CD-ROM or on paper.

You can request free registration at the Ulrich's commercial site

Navigate the ocean of periodicals with the ISSN

Important reminder !
ISSN assignment is free of charge !

The **ISSN** (International Standard Serial Number) is an eight-digit number which identifies periodical publications as such, including **electronic serials**. More than **one million** ISSN numbers have so far been assigned.

It is managed by a world wide **network** of 77 **National Centres** coordinated by an International Centre based in Paris, backed by Unesco and the French Government.

The ISSN is used by various partners throughout the information chain: libraries, subscription agents, researchers, information scientists, newsagents (through its **barcode** version).

The world database of ISSN numbers (and the corresponding bibliographic records), known as the **ISSN Register**, is available on CD-ROM (**ISSN Compact**), through a Web interface (**ISSN Online**, which may be freely evaluated and **tested** for a period of one month). These products may be subscribed to through our **order form**.

Publishers or other interested parties (libraries, documentation centres...) may request the **assignment of an ISSN** to a given periodical, if it does not yet have one. It is also possible, through the **ISSN checker form**, to check the ISSN number(s) being used in a document or web page.

www.latindex.org

Regional information system for scientific journals, created in 1995.

Ibero-America is the only region in the world that has its own information system on scientific journals.

It offers three different databases :

Directory: comprehensive, with more than 13,000 records

Catalog: selective (criteria) with 1,600 titles

Index: selective (format) with 2,000 links

www.latindex.org

Relationship with publishers: main challenges

Upgrade: The contact data of the editors and their offices are those that change more quickly. Editors are encouraged to use the "Link to Publishers" button that appears from the main Latindex page.

Coverage: Difficulties to exhaustively identify all academic journals in the country. A button will also be placed to register new titles.

Indirect visibility: presence in databases

The acceptance of a journal in a database represents a recognition of its quality.

The presence in databases fosters the visibility of journals.

Facilitates the location, request and reading of the papers they publish.

Publishers should be aware that the vast majority of databases restrict their coverage.

Databases can restrict your coverage by specializing in a subject, geographic region or language.

Assessment of criteria related to three areas of editorial work:

Management: know how the journal is administered, how stable it has been and how it is disseminated.

Standardization: observance of international standards that facilitate the identification and registration of publications.

Contents for indexing purposes: presence of useful elements for document analysis and creation of information records.

Science and Technology

ASFA. Aquatic biology, fisheries, marine legislation, marine geology.

BIOSIS (*Biological abstracts*). Life sciences, microbiology, experimental medicine, ecology, biochemistry, biotechnology, neurology

Academic organizations (institutions, societies, associations) and social organizations: To serve its members and generate resources for other activities.

Publishing companies: Profit-oriented; with great commercial and business experience.

Research: Reports that communicate original research results for the first time (**originality**).

T-P and Div: **Authentic** papers (hence the need for judgment).

His papers address issues of concern to other researchers or workers in a given specialty, or to a large number of readers (**relevance**).

Communicate research discoveries, which avoids repeating expensive research work.

They establish the priority of these discoveries, as indicated in the presentation, acceptance and publication dates of the papers.

They filter out high quality papers from the mass, through the process of "peer arbitration" (judgment).

They represent a record of all quality research in a specific field.

To a certain extent, a journal can define the area it serves, through its editorial policy.

They are all the principles that govern the journal; that guide the authors and the readers. It should be noted:

To whom it is addressed (type of reader)

Sections and types of papers by each

Themes (by section, if there are more than one)

Selection process of papers

Circulation

Periodicity

Instructions for authors

A journal confers its reputation on high-quality peer-review work on published papers.

The editorial group (director and associate editors) is an important prestige factor.

There are other indicators...

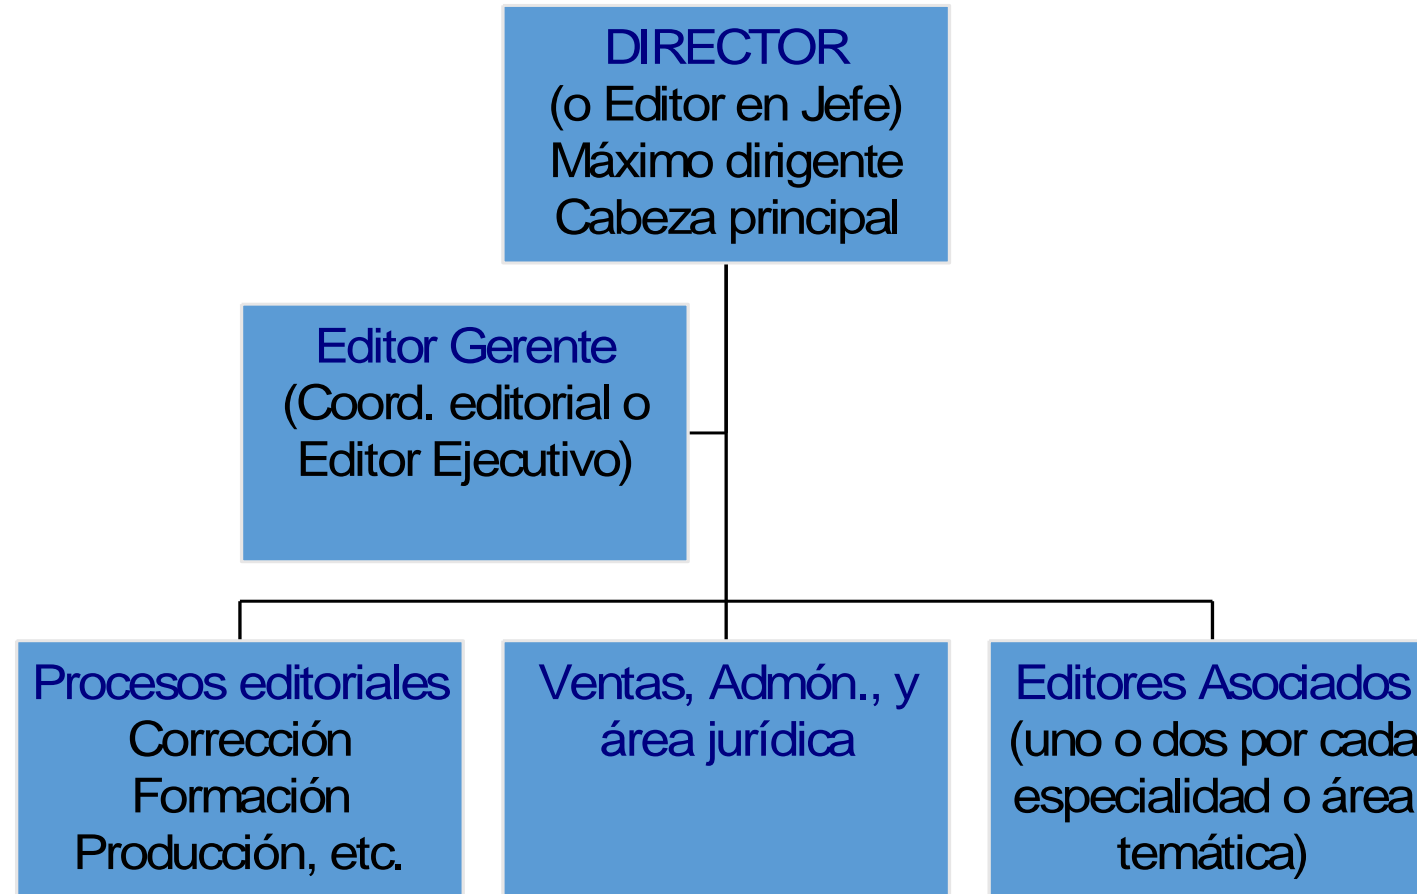

The arbitration process is, in general, anonymous. Neither the author nor the referee knows the identity of the other (double-blinded).

There are journals that reveal the identity of the author to the referee (blinded).

Are the arbitrators, really, pairs of the author, in the sense of equal?

Does anonymous arbitration give better results?

Publisher (publishing house): chooses the editor of the journal, or he proposes the project to that.

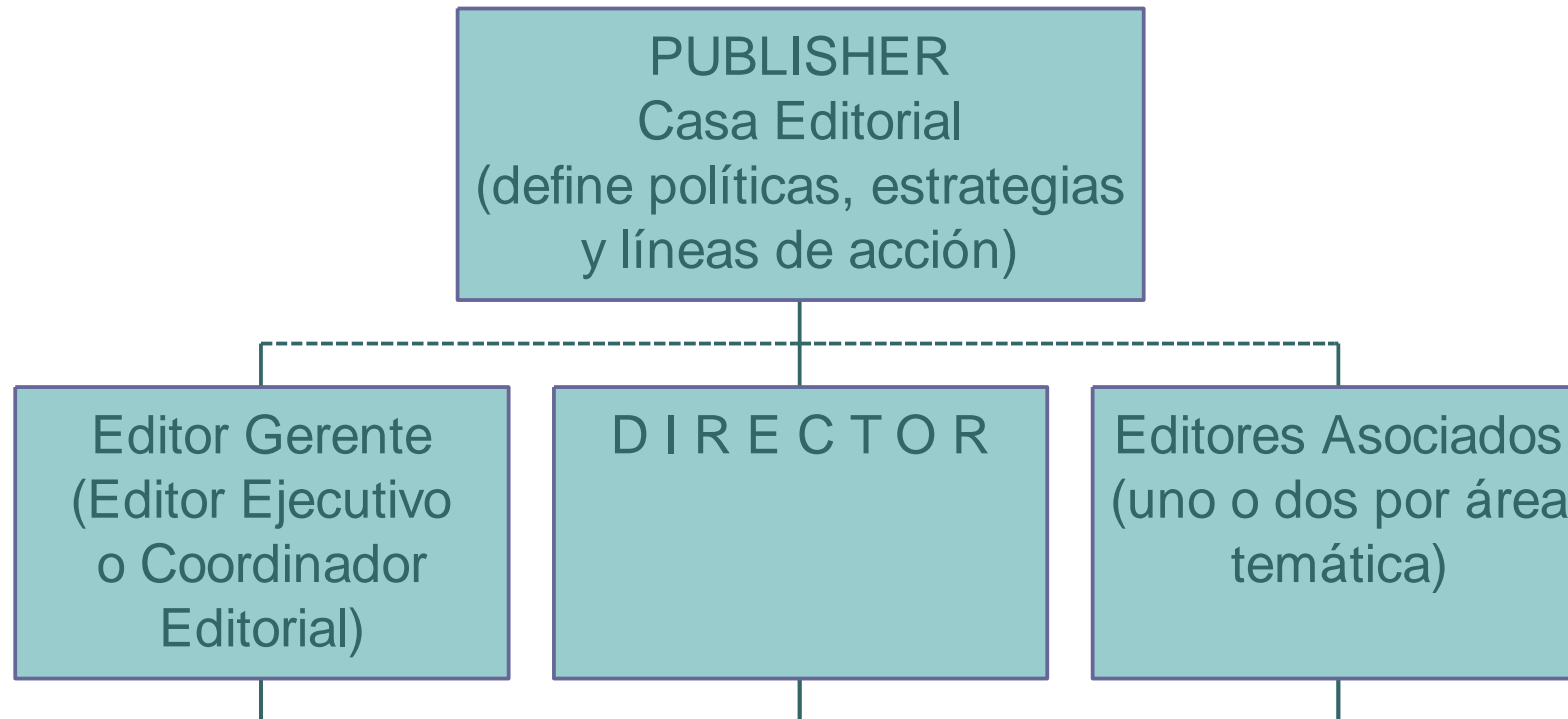

Director (editor or editor in chief): Responsible for everything, mainly the quality and diversity of the content (originality, relevance, sections).

The director, together with the publisher, chooses the associated editors.

Referees: External and independent of the journal, are chosen by the associate editors (sometimes by the director).

Por Comité

There is frequent interaction between the publisher and the director; little or no between publisher and others.

The Director remains the leader, but there is a lot of interaction (discussion) between him, the associated editors (EA's) and the managing editor. Many decisions are made by committee.

Issues of editorial follow-up, production, marketing and others.

The referees (external and independent) are chosen by the EA's.

The authors

Why do they seek to publish in journals of great reputation?

ECORFAN-México, S.C.

| Ecuador | Taiwan | |
| Peru | Nicaragua | Paraguay |

The authors publish their work there to communicate their findings as widely as possible, so that their ideas are recognized and progress in their careers.

Publishing in a journal with a high impact factor and an international readership is the most effective method to achieve the above.

Prestige

Circulation (who read it)

Wait time

Editorial body

Authors (who publish there)

Support (printed and / or electronic)

1. The Director: verifies relevance, selects Ed. Asoc. Or arbitrators ... makes the final decision
2. The Managing Editor: verifies compliance with the rules of presentation and takes a detailed control of the path of the paper
3. The Associate Editor: read the paper in detail and choose arbitrators
4. The Referees: they **dictate** originality, relevance, structure and content, writing, references and, sometimes, do things that the director and managing editor should do

Every author deserves an ethical and professional response, for having sent their work to a journal.
Possible answers :

Accepted without changes

Accepted with changes

Submit a second revision (rejected the current version: make major changes)

Rejected (not appropriate, not interesting for the journal)

➔ It is rare, but it happens

It is original or authentic, and it is relevant

The author must be notified of the probable - or better, exact - date of publication, and the journal must comply with this commitment

The author must sign the letter of assignment of rights to the journal

➔ Uncommon situation in prestigious journals

The journal must clearly indicate the changes it requires the author to have his / her paper published, and indicate the deadline for the final version.

Since they are minor changes, it is not necessary to justify the requested changes.

➔ The paper has a value and therefore they have not rejected it completely

The journal must indicate all the changes requested and those considered major, explain in detail the reason or justification of these

The deadline to receive the final version must be indicated

The subject and / or the level is inappropriate

The result has already been published previously

When communicating this “ugly news”, be considerate of the author and try to be diplomatic

Offensive, dry or unguarded responses keep authors away

Associate editors : widely recognized in their environment and convinced of the importance of the magazine

Referees: experts on the topics; who have already been arbitrators, and are quick to elaborate their opinions (the managing editor must be behind them all the time)

Managing Editor: knowledgeable about issues and editorial processes; organized; of good character (conciliatory); regular reader of journals of similar topics (very informed)

Principles to be considered to safeguard the quality of the journal and the prestige of all participants:

Originality and reuse

Confidentiality

Authorship

Copyright

Conflict of interests

Do not reuse previously published works, totally or partially, to be presented in another primary publication

Without the corresponding permits, you should not send another journal a work already published

Do not send it to more than one journal at a time

The author entrusts the journal with the results of his work and his creativity. Put your prestige as a researcher in the editor's hands.

Editors and arbitrators must refrain from disclosing or discussing confidential work information with anyone outside the journal.

➔ If a job is rejected, it must be returned to the author immediately.

The authors de un paper son responsables de su contenido, no sólo el principal.

The author is the one who assumes the intellectual responsibility of the results that are reported.

The anotados, must have made an important contribution to the results.

The authors own the intellectual property of their respective papers

A journal may not reproduce a paper in another medium, or authorize its reproduction in another publication without the consent of its author, unless the latter has assigned the rights to the journal

Render rights protects the author against unauthorized plagiarism or use

When a paper or author could come into conflict of interest with the director or sponsor of the journal, the work must be returned to its author so as not to affect it with a long waiting period or a skewed result

If there is a conflict with the referee, the referee should notify the director so he can find someone to replace him.

The presence in directories is of great relevance since they are often used as a first resource to know that a journal exists

It is important that publishers differentiate the services offered by a directory from those offered by others. The directories **provide information about the journal as a whole**, not about the fascicles and papers published in it.

In this sense, it is recommended that the journals credits distinguish indexing services (databases) from the registry in directories or catalogs.

Service oriented to the fascicles of a journal
Represent the collections of journals of a library
They are selective since they reflect the subscriptions of a library
They also record journals received by exchange or donation
They provide general information about the journals (similar to the directories) but also contain the stock of stocks (fascicles) and indicate their location

Journals lists that meet the requirements of the catalog

Useful to differentiate a group of journals from the rest

They can be specialized in journals of a single discipline, country, region

They generally describe the journal as a whole

Selection criteria based on internationally accepted editorial characteristics apply

They tend to be unidisciplinary (specialized)

They offer analytical records of documents and summaries

They have links to full texts selectively

Information is retrieved through indexes (author, title, keyword, type of document, language, etc.)

They can generate bibliometric indicators from each list

The online versions are generically called databases

Highly selective

They tend to be multidisciplinary

They offer analytical records of documents, summaries and links to complete texts selectively

It is accessed through various indexes (author, title, descriptor, ...)

They provide specialized bibliometric indicators (Impact factor, analysis of citations, Index of immediacy, Index H, ...)

Free registration

Through national collection centers

Via forms or questionnaires

Identification of the most suitable services for a journal

Analysis of your selection criteria and policies

Sending an application

They usually undergo evaluation

The answer may take

Many times the rejection is not due to lack of quality, but to the "*economy*" of the database: if the discipline covered by the journalist is sufficiently covered, it is not accepted

The acceptance of a journal in a database represents a recognition of its quality.

The presence in databases fosters the visibility of journals.

Facilitates the location, request and reading of the papers they publish.

Most of the databases have a selective coverage regarding the journals they index. They usually restrict their coverage by specializing in a subject, geographic region or language.

In the case of the SciELO collections, it is necessary that there is a SciELO center in the country. Selection criteria apply.

In the case of Redalyc, the postulated journals must pass through the evaluation based on the criteria of a scientific advisory committee. See on your site "Process of inclusion of journals".

In the case of DOAJ, the website has a button to apply for journals. See on your site "*Suggest a journal*". The journals must meet some requirements such as having at least 5 papers published, not charging for access and making the papers available immediately (however).

By access type :

Special virtual hemerotecas by subject or region

Commercial distributors

Own sites

By available contents :

Complete texts: relevant information plus full texts of current and previous numbers.

Partial access: information about the journal, advertising, editorial organization, prices, tables of contents, summaries.

The screenshot shows the SciELO website interface. At the top center is the SciELO logo with the tagline "Scientific Electronic Library Online". To the right, there are language options for "portugués | english" and a "Contacto" link. The main content area is divided into several sections:

- Red SciELO:** Includes links for "Sobre SciELO", "Indicadores Bibliométricos", "Acceda via OAI y RSS", and "Portal SciELO.org antiguo". It also lists "colecciones" for various countries (Argentina, Brasil, Chile, Colombia, Cuba, España, Portugal, Venezuela) and "en desarrollo" for Mexico, West Indian Medical Journal, Sudáfrica, Bolivia, and Costa Rica.
- Búsqueda de artículos:** A search bar with a "método" dropdown set to "integrada", a text input field, a "donde" dropdown set to "Regional", and a "Buscar" button. Below it, it lists "Índices (Regional): país, autor, palabra clave, título, organización, año de publicación, tipo de documento, idioma original".
- Servicios personalizados:** A login section with "Login" and "Contraseña" input fields and a "Login" button. It also includes links for "Envíame una nueva contraseña" and "Regístrate para servicios personalizados".
- Lista revistas:** A section for "Búsqueda por Revistas" with a search box and "buscar" button. It also features "Por lista alfabética - todos" with a grid of letters (A-Z) and "Por tema - todos" with a list of scientific disciplines.
- SciELO en números:** A statistics section showing "644 Revistas", "13.987 Números", "207.002 Artículos", and "4.122.951 Citas".
- Noticias:** A news section with several article titles, such as "Feria Mundial Municipios y Salud" innova en comunicación, información, conocimiento y experiencias, and "Rapid Research Notes: nuevo tipo de literatura científica posee repositorio para Influenza".
- Press Releases:** A section for "Perfil del investigador fisioterapeuta Brasileño".
- Nuevos:** A section for "Última actualización - 21/sep/2009".

Product of the ***Open Archives Initiative - OAI - Open Archives Initiative** , born in 1999.

Paradigm of open access [OPEN ACCESS], arises as a result of the difficulties encountered by the world community in the access to scientific information giving rise to various statements (Budapest, 2001, Bethesda, 2003, Berlin, 2003) .

Free access: free circulation on the Internet of academic and scientific literature allowing any citizen to read, download, copy, distribute, print, research, quote or link the text in a comprehensive manner.

DOAJ offers open access to multidisciplinary content of 4,358 journals to full text, with scientific and academic quality

Bibliometric statistics and indicators

The presence in directories of periodicals is of great relevance since they are often used as a tool to locate and select journals.

It is important that publishers differentiate between the services offered by a directory and those offered by a database.

The **directories provide information about the journal *as a whole***, but not about the fascicles and papers published in it.

In this sense, it is recommended that the journals credits distinguish indexing services (databases) from the registry in directories or catalogs.

The acceptance of a journal in a database represents a recognition of its quality.

The presence in databases fosters the visibility of journals.

Facilitates the location, request and reading of the papers they publish.

Most of the databases have a selective coverage regarding the journals they index. They usually restrict their coverage by specializing in a subject, geographic region or language.

The databases that most Latin American journals collect are :

| | |
|----------------------|---------------------------------------|
| CLASE | Social Sciences, (UNAM, Mexico) |
| PERIÓDICA | Science and Technology (UNAM, Mexico) |
| HAPI | Social Sciences (UCLA, USA) |
| LILACS | Health Sciences (BIREME, Brazil) |
| ASFA | Aquatic Sciences (UNAM, Mexico) |
| AGRIS | Agriculture (FAO) |
| BIOSIS | Biology (BIS, USA) |
| Historical Abstracts | History (ABC Clío, USA) |
| IRESE | Education (UNAM, Mexico) |
| LLBA, | Linguistics and Language Behavior |
| Abstracts | Linguistics (USA) |
| PSYCINFO | Psychology |

By access type:

Special virtual hemerotecas by subject or region

Commercial distributors

Own sites

By available contents:

Complete texts: relevant information plus full texts of current and previous numbers.

Partial access: information about the journal, advertising, editorial organization, prices, tables of contents, summaries.

Thank You Very Much
